NEW YORK, SUNDAY, APRIL 23, 1911.-Copyright, 1911, by the Sun Printing and Publishing Association

HOW IT WOULD BE USED IN CASE OF A WAR.

Portable Telegraph and Telephone Plants Field and Cavalry Buzzers-Motors for the Artillery—Electricity in Coast lights assigned to the mining command, &c. Defence-Double Use of Searchlights.

In the field service of the United States the ordinary telegraph apparatus is modified to fuit the conditions. A new eignal corps instrument of value is called the "field insuction telegraph kit." The outfit weight about eighteen pounds, and tests show that the apparatus works successfully for from 250 to 300 miles ever No. 9 golvanized iron wire.

There is as ordinary service telephone set as well as a lighter instrument known the field telephone. Complete with battery, says the Electrical Record, this instrument weighs but twenty pounds and may be carried anywhere in the field. In the work of the outposts of an army this equipment is generally of far greater value than visual signalling, its secrecy being a cardinal advantage.

The Russell cutin telephone set, weighing only ten pounds thirteen ounces, with is another valuable instrument designed for operation over short dis-tances on telegraph lines. The so-called field artillery telephone is an instrument designed for use by the field artillery in ommunicating over base lines. It consists of a transmitter with a battery key, induction coil and battery and a head telephone with flexible bands. No facilities for calling are provided.

An important equipment is the field switchboard, which is especially adapted to camp service. It consists of a strong oak box with leather carrying case, ground red and tripod, the inside of the box being equipped with ten line drops with

being equipped with ten line drops with the necessary ringing. listening and connecting cams to enable four sets of connections to be established simultaneously. A breast set and single head receiver are provided for the operator. The entire outfit weighs about seventy-five pounds and can be set up in a few moments.

The field buzzer is one of the most important devices used in a modern army, as it is practically the only instrument capable of operating successfully over hastily constructed lines in the field, whose insulation cannot be of the best on account of the contact with the ground water, dampness and metallic obstructions which often is encountered. It has well been said that upon the integrity of the service of the man behind the buzzer may rest the movements of the success or failure of a campaign.

The buzzer is a combined telephone are the buzzer is a combined telephone.

Under such conditions night was a danger on suctions and consistions and a favorable time for the side that had the searchlights.

Harbor defence is effected by the mobile proposition on the side that had the searchlights.

Harbor defence is effected by the mobile proposition on the side that had the searchlights.

The tield buzzer is one of the most important devices used in a modern army, by gunfire from fortifications and professional women who stand ready to take offices or desk room in the burser way by building as soon as we can get on successfully over the explosion is electrical. In harbor defence is effected by the mobile proposition and the marker than a favorable time for the side that had the searchlights.

over hastily constructed lines of too poor insulation for ordinary Morse instrumental service.

England and the middle Atlantic States.
One of the most effective equipments used in the United States army is designed to be carried by pack mules and is divided into three 150 pound loads. The transmitting and receiving apparatus is contained in a leatheroid trunk 30x17x14 inches inside measurement. Current is applied by storage batteries or by land generator.

Council chamber, Tokio, Oyster Bay and Sc. Petersburg.

Emergency equipments of portable character were pressed into service and extra operators massed on the spot. Yousual facilities were afforded the press. The eyes of the civilized world were focused upon the conference and electricity won its crowning triumphs at the end of the greatest war of modern times by annihilating every possibility of misunderstanding and delay.

generator. Extensive applications of electricity are made in the important service of coast searchlights, manipulation of coast defence guns and mortars, operation of now rarely seen except at the opening ammunition hoists, range and position of Parliament, and then there are very ammunition hoists, range and position finders, field and fortress telephone and telegraph service, the lighting of casetoates, garrisons, gun sights and maga-

with district, fire and mining commander

ELECTRICITY IN THE ARMY and with the searchlights attached to the station; that the fire commander's station shall be so equipped as to communicate with the battle commander and with each primary and secondary battery of his command; that the mining commander's station shall be equipped to communicate with the battle commander, the secondary station, mining casemates, loading room and with the rapid fire batteries and

To establish such communication the eignal corps provides telephones of special type, the telautograph and telegraph, lectrical appliances for indicating time intervals, for the collection of meteorological and tide data and range zones. The telautograph is coming into widespread service in fortification duty as a supplement to the telephone and buzzer,

when used by shore fortifications to light channels or by a vessel to discover the approach of torpedo boats; offensive when used as blinding lights to smother the light of an approaching vessel and confuse her pilot. Field serachlights are usually supplied with electricity from a dynamo driven on the portable truck of a steam, oil or gasolene engine. At Port Arthur, according to George Kennon, the Russians illuminated the field of action with star whole rockets and powerful searchlights

they borrowed from their battleships, and in night attacks the Japanese had to advance and fight in a brilliant glare which not only blinded them but hid in a mantle of blackness the position of their enemy. The Russians at that time had no less than nine powerful searchlights, and some of them were so powerful and penetrating as to show leaves of trees and blades of grass at a distance of more than three miles. Under such conditions night was a danger-ous rather than a favorable time for

over hastily constructed lines of too soor insulation for ordinary Morse insulation for ordinary Morse instrumental service.

In Gen. Lawton's advance through closing of the fire control switch, a signal

Revival of the State Coach.

From the Court Journal. few compared to the number seen twenty

For the great event in June many peers mates, garrisons, gun sights and maga-laye ordered new state coaches, and as zines, the firing of guns, submarine and these cumbrous but remarkably handsome subterranean mines, the control of dirigi- equipages are very costly, the harness alone subterranean mines, the control of dirigible torpedoes and the timing of projectiles by chronographic methods in ballistic experiments.

Fire control requirements demand that the battle commander's station shall be see equipped as to communicate electrically with district, fire and mining commanders with footmen have gradually fallen into disuse.

MADISON SQUARE GARDEN.

With Women Engaged in All Sorts of guides for sight seeing in New York.

confident it will be a glittering success.

These sponsors are few at present, but they make up in enthusiasm what they lack in numbers.

had already built up a flourishing business of her own here in New York and in that business was the germ from which the that business was the germ from which the new idea sprouted. No sooner had she in-corporated the company, however, than she met with a street car accident, from which she is just recovering, so that for two years the scheme has languished.

Within the last few weeks it has taken on new life. The extent of this resuscitation may be judged from the statement, made by the president of the company, that she would like to secure Madison Square Garden as a permanent home for the bureau. She is trying to interest women of wealth in this idea, but even her own rainbow hopes seem to fall short of complete success at that point, for while casting longing eves upon the Garden she has taken an option on a couple of dwelling houses which can be remodelled to fit

houses which can be remodelled to fit the needs of a more modest beginning.

"For me even to think of taking Madison Square Garden may seem like a wild dream," she said the other day, "but I have dozens of applications from business and professional women who stand ready to take offices or desk room in the bureau's building as soon as we can get one."

The hotel or boarding house where girls and women can flock by themselves is no new thing; but this project of an office building to be owned, run and occupied by women only is a novel proposition. The proposed arrangements are outlined with enthusiasm by its promoters. All branches of business in which women are engaged as owners and operators will be represented. It will surprise most persons to find how imposing a list this would can be shown the stablishment. housekeeping, what work of the establishment, housekeeping, chamber work, cooking, waiting and awaiting employment. In this way the head of the department will come to know through her own experience the capabilities of every girl in the place and can accomplish a good deal in training them to greater efficiency.

A woman applying for a servant can be shown the work of the one she engages in the public dining room in connection, and all the work of the establishment, housekeeping, chamber work, cooking, waiting and awaiting employment. In this way the head of the department will come to know through her own experience the capabilities of every girl in the place and can accomplish a good deal in training them to greater efficiency.

A woman applying for a servant can be shown the work of the one she engages in the public dining room and if she likes it can engage the cook at once, provided with a waitress. The would-bus material waiting and awaiting employment. In this way the waiting and awaiting employment. In this way the waiting employment. In this way the waiting employment. In this way the deverging and of the department will come to know through the waiting employment. In this way the waiting emplo

method known as judgment firing a range finder is located in a fire control station at some point which commands the waters which have been mined, and the position of every mine is carefully plotted on a chart so that the location of a hostile decorators, dressenging pitched note in the telephone receiver, which is used as a sounder when the apparatus is employed as a telegraph instrument. The American army in China and the Philippines used it extensively and habitually as a means of telegraphing of the property of a positive constructed lines of the course is plotted on the chart and the time of arrival type the course is plotted on the chart and the time of arrival type the course is plotted on the chart and the position of every mine is carefully plotted on a chart line of the course is plotted on the chart and the course she is following. workers, stenographers, typists, trained nurses, teachers of languages, music, fine and industrial arts. Women of all professions and vocations.

Of course there will be offices for women

inter time for transmitting the control survey. In Gen. Lawton's advance through central Luzon in 1890 communication was almost continuously maintained by this means over a distance of thirty miles. About ten miles of this was imperfectly insulated line and twenty miles was bare wire of various kinds laid on the earth trees and bushes. During part of the time heavy rain prevailed and flooded rivers would have prevented messengers from going back. In spite of these conditions the buzzer centinued to operate although the results were naturally extremely faint.

The buzzers used in the United States arm are either of the field type or the cavalry type. With the field buzzer, which weighs complete about 11 pounds 2 ounces. A waterproof telephone transmitter with a push button key is provided in addition to the buzzer proper. When the telephone set ceases to be effective the buzzer is usual by still capable of performing the most exacting service. The cavalry buzzer is of the same general type but its weight has been cut down to five points 12 ounces.

Wireless telegraphy and telephony are important factors in military campaigns, the first of the same general type but its weight has been cut down to five points 12 ounces.

The whole tendency of electrical applications in we is to reduce fishing to apply the cavalry buzzer is of the same general type but its weight has been cut down to five points 12 ounces.

The whole tendency of electrical applications in we is to reduce fishing to apply the high points and the time for same though the results were more fished to buzzer ropers. The whole tendency of electrical applications in we is to reduce fishing to apply the control and the first points and the first p

but neither has passed far enough beyond the experimental stage to warrant the placing of the greatest confidence in these methods of communication. In the important filed of coast defence, however, wireless telegraphy is as valuable as on the ocean itself. For land service it must at present be regarded largely as a resource rather than as a main dependence. One of the most important applications of wireless telegraphy thus far made in the United States army is that at Norton Sound. Alaska, as a part of the Valdez Nome system of the service. As many as \$600 words have been transmitted over this section in a single afternoon. The Seward Pentusula of Alaska is cut of from the world for about eight months of each year, except for an occasional mail carried by dog sled, and over 1,000,000 words were sent over this route in the first year of its service.

In the Philippines wireless telegraphy is growing constantly more valuable, particularly in replacing cables difficult to maintain among coral reefs. Wireless stations exist for artillery work at many coast fortifications on the shores of New England and the middle Atlantic States. One of the most infective equipments used to the conducting particularly in replacing cables difficult to maintain among coral reefs. Wireless stations exist for artillery work at many coast fortifications on the shores of New England and the middle Atlantic States. One of the most infective equipments used to the conduction of scientific programs with the showing drawn the simple thanks of each policy and the program of the service. As many as \$600 words have been transmitted over this section in a single afternoon. The Seward Pentusula of Alaska is cut of from the world for about eight months of each year, except for an occasional mail carried by dog sled, and over 1,000,000 words were sent over this route in the first year of its service.

In the Content of the Valdez Market of the Valdez Market of the Valdez of th Public stenographers, typewriters and multigraphers will abound in this feminine beehive. There is to be a commercial institute which, by the way, is already running and has worked out an ingenious system something akin to a practical solution of how to pull oneself up by one's own bootstraps. The institute takes orders for typewriting and similar work and also receives students who want to learn how to do that sort of thing. It makes one hand wash the other by turning the orders over to the students for execution. Then it collects at both ends.

A bureau within a bureau will be the

gate the applicants themselves. It will recommend hotels and engage accommo-

FOR ALL WOMEN OF BUSINESS dations. It will provide information about clubs, theatres, churches and social entertainments. It will supply chaper-A SCHEME BIG ENOUGH TO FILL ons, meet trains and boats, purchase railway tickets, check baggage and offer every possible assistance to women travelling alone. It will secure summer cottages It is Proposed to Fill an Office Building or board, make out itineraries and furnish

Occupations—Benefits of the Cooperation That Would Follow It.

The latest project that has been put forward by women for women is that of establishing a business bureau. The plan as outlined by those promoting it has novel elements and its sponsors are confident it will be a clittering success.

Suddes for sight seeing in New York.

The bureau is to have a purchasing department which will buy anything for anybody, from a wedding outfit to a picture post card. It will take orders for coal and wood. It will put an entire bereaved family promptly into the proper sable trappings of woe. It will run a club reception, a wedding or a Punch and Judy show for the children.

Another intramural bureau will be

both of which might easily be useless in the terrific din of a bombardment.

Electric searchlights are used both as offenive and defensive aids; defensive as Southern woman at its head She in the terrific din of a bombardment.

Electric searchlights are used both as offenive and defensive aids; defensive as Southern woman at its head She furnish first aid to the young housekeeper

There is one department of the bureau

This is a sort of glorified intelligence This is a sort of glorified intelligence office with some unusual attachments. The president of the company has already tried out some of the proposed factors of this part of the scheme and save that they work like a charm. The department keeps tab on both the maid and the mistress. To the former it gives medals for terms of faithful service. It acts as mediator between employer and employee, and when mediation is impossible it separates them and fixes them up in another combination.

The plan is to have a combined intelligence office and club for servants. Here

gence office and club for servants. Here they can stay while temporarily out of a place. There will be a restaurant or pubplace. There will be a restaurant or public dining room in connection, and all the work of the establishment, housekeeping, champer work, cooking, waiting and

face of these ideas looks like a mouse offering to help an elephant over a bridge, but everybody knows that authorized capital, unlike mice, can be indefinitely enlarged. The promoters of the plan intend to make the bureau not only a corporation of women but one that shall be run by the cooperation of women. Only women will be allowed to hold stock and no one woman may hold more than fifty shares at \$10 a share.

There will be a sort of reciprocity treaty binding on all members of the bureau. With this treaty in force everybody is expected to do everybody else a good turn whenever possible. The doctors will give their bills to the bureau to be collected and will send their patients to bureau agents to take out life insurance. The music teacher will have her pupils buy their pianos through the purchasing agency. The real estate dealer will send ther clients to the interior decorator for the furnishing of their new houses.

Everybody will get stenographers from the commercial institute department and these stenographers in turn will send all the outside work they know of to the institute. There are unlimited possibilities in this end of the project and its promoters seem sincere in their enthusiastic predictions of what could be accomplished by such a group of business and professional women working in harmony.

MR. BLINKINTON'S OVERCOAT. Job He Thought Impossible: but He Didn't Know the Tailor's Resources.

"My spring overcoat needed a little repairing," said Mr. Blinkinton, "and I took it around to the tailor's to be fixed

There wasn't so very much to be done to it, but there was one place in the lining that had to be patched and about that was in some doubt, for the lining was different in color from any other I ever saw and I didn't know that the tailor could ever match that, but he said it would be easy and so it proved.

"He pulled out a big drawer that was full of silk and woollen stuff in odd shapes, in pieces big and little, in squares and triangles and wedges and little strips and corners and scraps, a wonderful collection; and he looked this stuff over and found nothing. Then he pulled out another drawer as big and as full of the same sort of stuff in blacks and

\$1.25 All Silk 27 In. Colored Satin Pongee, 65c.

THE SATIN SHANTUNG PONGEES with the smooth and lustrous satin finish are so much in fashion for spring gowns that we were quick to accept the offering of a maker's surplus at perhaps the lowest price that the same quality Silk was ever bought for.

Now we are ready to share our advantage with you—3.500 yards of Satin Shantung Pongee with a fineness of weave and luster identical with a Satin Shantung that is sold under a copyrighted name at \$1.35 a yard.

There is a splendid assortment of the best spring and summer colors, including black. 65c. a yard tomorrow.

New Silk Waists, \$1.50 and \$1.98. All of \$3.50 to \$5 Quality.

THE SH.K WAISTS AT \$1.50 show plenty of the sought-for navy blues and grays, black and brown also, in both mes-satine and taffeta. There are many in the tailored style, many with embroidery, a large floral spray down the front; some with side frill. They have particularly well shaped sleeves and on the long sleeves the fancy cuffs are a very good feature.

THE SILK WAISTS AT \$1.98 are a varied assortment, each one apparently striving to outdo the other in prettiness

Henry of blacks and dark colors, some with embroidery, many with elaborate braided designs, some with side frills, some with necktie bows, a few white messaline all-over Persians and striped silks and chiffons for the earliest comers-In the lot are some particularly good Waists of Shantung in a somewhat severe style, with long sleeves and shaped cuffs. that have never sold for less than \$5.

LINGERIE WAISTS AT \$1.50, VALUES TO \$5.

These values are a veritable "hurry up" call to every woman who needs a dainty fine Waist for this summer; a special value that is not likely to be duplicated. They are all of sheer fine soft lawn and batists, all trimmed with good German Valenciennes lace, all of exquisite daintiness. High neck and low neck models, those with kimono sleeves and with long sleeves. One model has three large fancy medallions of fine Valenciennes and two medallions of real Irish crochet lace in the front; another has three medallions of Venise embroidery in a very effective openwork pattern. A new arrival has a yoke and front of the colored Bulgarian embroidery that is so popular and a full chemisette of good lace.

Fashionable Waists of voile and marquisette, both high and low necks, long sleeves or kimono style. Most of them have the colored embroidery that is so emphatically the mode at present: some of them are elaborately trimmed with cluny lace; some are embroidered in white with touches of vivid contrasting color. And there are a few tailored styles. At this price are some especially good voile Waists trimmed with a spray of fine white and colored hand embroidery with a lace trimmed high collar and lace trimmed three-quarter kimono sleeve; others of fancy striped marquisette, trimmed in self color bands, made peasant style. \$1.08 Embroidered Volle Walsts, Values to \$3.75.

At \$2.98 Silk and Chiffon Waists, Values \$3.98 to \$6.50. At \$2.98 slik and Chiffen Walsts, Values \$3.98 to \$6.50. In this lot of 1,000 Waists are some of the most remarkable values we have ever offered. They are in new designs, chiffon, messaline and taffeta. The chiffon are braided or embroidered, many with effective touches of gold and tinsel, each one with some distinctive personal touch. There are some wonderful waists of French chantilly, silk lined and heavily trimmed with braid, long sleeves. There are a number of chiffon Over-Blouses, braided, embroidered and some beaded by hand, black, brown and navy. The tailored messalines and taffetas are embroidered styles, with frills, long sleeves, etc., among them.

Men's Shoes and Oxfords,

\$3.25 for the \$5 Samples.

SAMPLE SHOES are made at least as well as regular stock—a maker always puts his best foot foremost in his samples.

So when we could get some 500 pairs of the sample Shoes and Oxfords in spring and summer styles to sell at \$3.25 instead of \$5, we thought a great many men would like to have us do it.

Sizes 7, 7½ and 8. Mostly in B width. Pretty much all leathers and shapes. Worth coming early
